## **11 Millionth Wireless 911 Call Made in Indiana**

INDIANAPOLIS (May 11, 2011) – Indiana has the largest E9-1-1 internet protocol (IP) network in the world, which serves 6.4 million residents and the travelling public who pass through the crossroads of America.

“Indiana’s IP based E9-1-1 service is the most advanced in the world and has helped save thousands of lives,” said State Treasurer Richard Mourdock.

In 2009, Indiana was recognized by the E9-1-1 Institute in Washington, DC for having the best E9-1-1 program in the nation and in April 2011 Indiana’s public safety community was featured in Time magazine - “[How to Fix 911](#)”

Since its inception in 2006, the E9-1-1 IP network has fully integrated 52 of Indiana’s 92 counties. Today, E9-1-1 dispatchers can easily transfer calls between public safety agencies as well as accept E9-1-1 calls via social media. The IP service can also locate a caller.

The 11 millionth call occurred shortly after 8:00 am on Sunday, May 8, 2011 and was answered by the Hancock County E9-1-1 center in Greenfield. Greenfield is located just east of Indianapolis.
